

Imes Ltd is an international engineering company providing engineering services and systems which enable our customers to maintain the capability and availability of cranes, lifting equipment and specialised structures. Key industries in which Imes operate include oil & gas, renewables, marine and defence.

Field Service Engineers

We currently have a requirement for Field Service Engineers to undertake a support engineering role in the delivery of existing services & products and the development of new solutions

Key Tasks:

- To support onshore production and test activities
- To support the refurbishment of existing and building of new equipment
- Mobilising to onshore and offshore locations to operate Imes equipment and deliver client solutions
- Ensure the overhaul and maintenance of equipment and all supporting aspects
- To test and control new/existing equipment and support aspects
- Interface directly with client whilst on site
- Ensure delivery of equipment and services within time and cost budgets
- Adherence of QHSE issues
- Support the design and prototyping of new solutions
- Participate in the commercial activities within Engineering Services

Experience:

Would suit candidate educated to a HNC/HND level with an Electrical/Electronic and strain gauge background. The ideal candidate will have field engineering experience in a similar role and will have good bench based technical skills in electronics. A proven understanding of measurement and monitoring techniques using strain, temperature, pressure, vibration, data collection and a good understanding of available and emerging technology for use in industrial measurement and monitoring applications.

To apply, please send your CV to: careers@imes-group.com. Whilst every effort is made to provide feedback on applications, if you have not received a response by Friday 7th November 2008, unfortunately your application will not be taken forward. We thank you in advance for your interest in Imes Ltd.
