

Imes Ltd is an international engineering company providing engineering services and systems which enable our customers to maintain the capability and availability of cranes, lifting equipment and specialised structures. Key industries in which Imes operate include oil & gas, renewables, marine and defence.

Structural Engineers

We currently have a requirement for a Structural Engineers to execute structural engineering activities with the objective of meeting the defined contractual scope to the relevant codes, standards and company procedures within the scheduled dates of the project.

Key Tasks:

- Detailed review of project structural design specifications, design drawings and standard detail drawings
- Produce project specifications and tender documents
- Technical evaluation of sub contractor quotations
- Visit fabricators during pre-award, and manufacture as required
- Produce project structural close out reports
- Knowledge of tie-in spool and piping design and analysis would be advantageous
- Supervision of technical discipline engineering team
- Technical focal point for internal and external customers

Experience:

Would suit candidate educated to Degree level in Structural/Civil Engineering or higher degree with CEng and institutional memberships. The ideal candidate will have previous experience in a similar role, in a technical environment within marine, defence or oil & gas sectors.

A proven understanding of the structural aspects of marine/offshore/subsea systems and their widespread application combined with an awareness of available and emerging technology for use in supporting new services and products.

To apply, please send your CV to: careers@imes-group.com. Whilst every effort is made to provide feedback on applications, if you have not received a response by Friday 7th November 2008, unfortunately your application will not be taken forward. We thank you in advance for your interest in Imes Ltd.
